

Risk-aware sampling, backed by a nominal retry

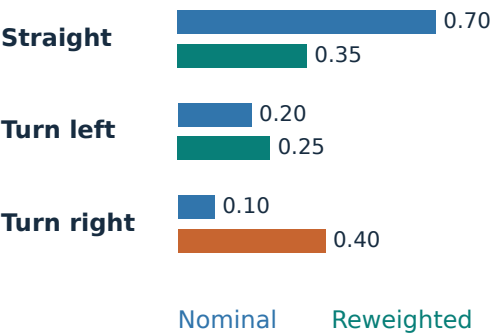

(a) From observations to scenario weights

Calibrated ambiguity → geometry-aware reweighting

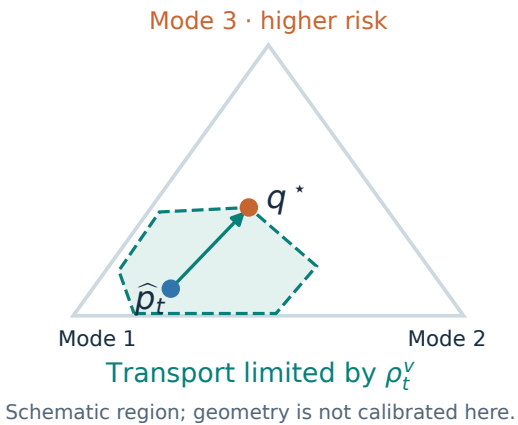

Illustrative probability transport

Example weights; not a rollout or an optimization result.

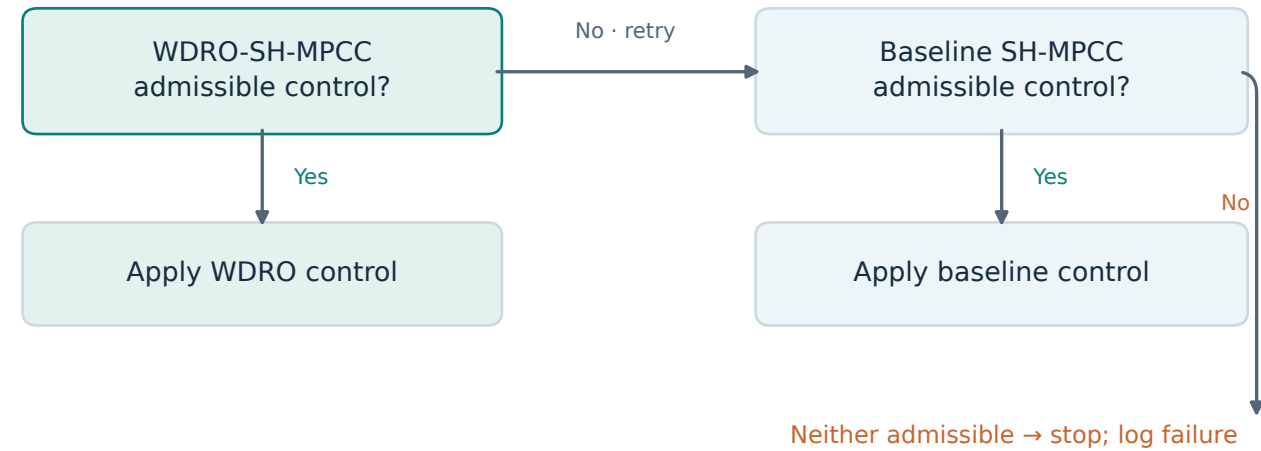

Higher-risk turn: 0.10 → 0.40

Transport-budget intuition

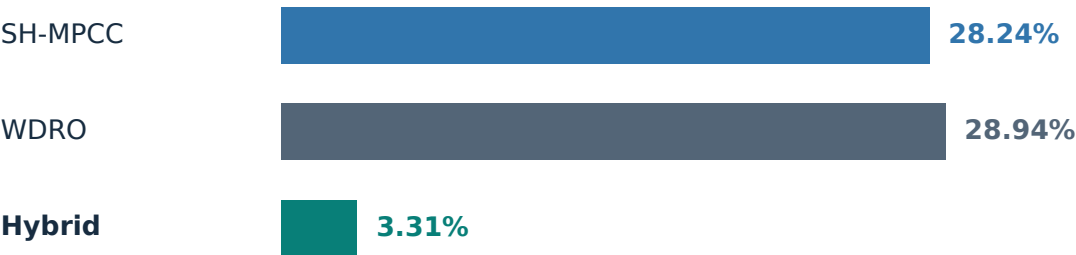

(b) Hybrid control and empirical takeaway

Retry with nominal weights when the WDRO attempt fails

No-admissible-control rate

Overall matched rollouts · lower is better

3.31%

Hybrid no-admissible-control rate

24.93 percentage points below baseline
