

# Algorithm 1: Scenario SH-MPCC with WDRO Reweighting

receding horizon: advance to  $t+1$ , update all inputs, repeat

•  $q^*$  upweights dangerous yet reachable modes

•  $\mathcal{F}_{S, \text{inj}} \subseteq \mathcal{F}_S$  (guarantees preserved)

•  $\rho = \rho_0(1 + \alpha/\sqrt{n_{\text{obs}}})$
